

Clara Ang

+65 90277768 · claraang14@gmail.com

Currently based in Australia and available for contact at +61 450067768.

SKILLS

Proficient in: Python, Java, C, MySQL, Git, NumPy, Pandas, MATLAB, HTML, CSS, Javascript, R, Powerpoint, Excel, Confluence, Gira, Selenium

EDUCATION & CERTIFICATIONS

University of Melbourne Computing and Software systems undergraduate Second Class Honours Division A (75.0 WAM)

COMP10001 Foundations of Computing	SWEN20003 Object Oriented Software Development
COMP10002 Foundations of Algorithms	SWEN30006 Software Modelling and Design
COMP20003 Algorithms and Data Structure	COMP3022 IT Project
COMP20008 Elements of Data Processing	COMP30026 Models of Computation
INFO20003 Database Systems	

CODING EXPERIENCE

Personal project MyCDC Bot

Sept 2024

- Automated lesson booking on the Singapore CDC website using Python, Selenium, andundetected-chromedriver.
- Used a proxy to avoid bot detection and ensure reliable performance.
- Handled login, dropdowns, calendar interaction and solved reCAPTCHA via an API.
- Enabled customizable booking preferences and reuse of session-based cookies for reliable performance.

Unimelb SWEN 30006 Projects

Feb 2024 - May 2024

- Refactored and extended the codebase for a mining simulation and a card game, improving design and adding new features while maintaining original functionality.
- Utilized object-oriented design principles (GRASP, GoF) to redesign systems for better maintainability and scalability.
- Managed the full project lifecycle, including design analysis, software modeling, and code implementation. Delivered well-documented code, detailed design reports, and software models, ensuring clear communication of design decisions and facilitating future development.

UniMelb SWEN20003 Final Project

July 2023 - Oct 2023

- Developed a Java-based music arcade game, ShadowDance, implementing multiple game levels with increasing complexity, inspired by Dance Dance Revolution.
- Designed and implemented a modular game architecture using object-oriented principles, ensuring code reusability and scalability
- Managed project timelines and version control using GitLab, ensuring on-time delivery and adherence to coding standards.

UniMelb COMP20008 Final Project

July 2023 - Oct 2023

- Utilized Python and libraries like Pandas, Numpy, and Matplotlib for data cleaning and preprocessing
- Implemented a decision tree classifier with entropy-based splitting and backward feature elimination, achieving 55.5% accuracy.
- Applied linear regression to uncover key predictors of popularity.

EXTRACURRICULAR ACTIVITIES

Committee Member, UMSU Women's Committee, University of Melbourne

- Promoting gender equity on campus by advocating for women's rights and addressing issues related to gender-based discrimination and harassment. Worked collaboratively with committee members to provide support and resources to women and gender-diverse students.

Hobbies and Interests: Table tennis, cooking
